

Claymation is the technique of modelling and animating clay into characters and objects and then bringing them to life.

Claymation is one of the oldest and most loved forms of stop motion animation and was used by animators Aardman to create the famous Wallace and Gromit films.

Plasticine is incredibly simple to animate and perfect for all ages. Even better it doesn't dry out so can be used over and over again to create a variety of different characters. Why not create a Plasticine monster? Give it some googly eyes and let your imagination run wild!

**Idea!** Create a claymation animation of a blob of Plasticine with googly eyes emerging from its storage tub.
